Empathy Map Canvas

iMovies MERN Project • Phase-wise Documentation

Project: iMovies MERN **Document:** Empathy Map Canvas

1. Persona

Primary persona: a student or working person who wants to quickly find a movie and book seats online. Secondary persona: an administrator who maintains movie listings.

2. Says

- “I want to see what movies are available.”
- “I need to know the price before I book.”
- “I want to check my booking later.”
- “I need errors to explain what went wrong.”

3. Thinks

- Is this movie available on my preferred date?
- Are the selected seats correct?
- Was my booking saved?
- Can other people see my personal bookings?

4. Does

- Searches or browses movie cards.
- Chooses a show date and time.
- Selects seats and checks the total.
- Signs in, books, and visits My Bookings.
- May cancel a booking if plans change.

5. Feels

- Wants the process to be quick and clear.
- May feel uncertain if loading or error messages are vague.
- Wants confidence that a booking belongs to their account.
- Values a readable interface on a laptop or phone.

6. Pains

- Unclear show details or prices.
- A confusing booking flow.
- Duplicate or unavailable seat selection.
- Losing the login session after refreshing.
- Unclear cancellation or payment status.

7. Gains

- Simple movie search.
- Visible show and price details.
- A clear booking confirmation.
- Personal booking history.
- Helpful validation and secure account access.

8. Design opportunities

- Use clear labels and consistent buttons.
- Show total price before confirmation.
- Explain errors in plain language.
- Keep user bookings scoped to the signed-in account.
- Make seat availability status explicit and refresh it from the server.
- Provide a clear demo-payment label until real payment integration exists.

9. Validation questions

- Can a first-time user complete a booking without help?
- Can users distinguish demo payment from real payment?
- Do users understand how to view or cancel a booking?
- Are error messages understandable?

Prepared for academic project documentation. Verify implementation-specific details and fill in actual test evidence before final submission.
